

As easy as 1-2-3

Our system safely & quickly pierces ears in 3 EASY STEPS using a gentle, hand-pressured instrument and sterile, pre-sealed, hypoallergenic piercing earrings.

You may see other ear piercing systems on the market, but only Inverness combines:

1. Fully-Enclosed Sterile Earring Capsules

Our pre-sterilized earring capsules ensure the safest ear piercing possible by preventing the piercing earring and Safety Back™ from being exposed to possible contaminants prior to piercing.

2. Exclusive Inverness Safety Back™

Our exclusive Safety Back™ shields the sharp piercing tip and prevents the earring back from being squeezed too tight. This provides ample space and airflow while the piercing heals.

The safe & gentle Inverness system is easy to learn and execute for your staff. We offer complete training and product support. Contact us to learn more!
